

Can a power amplifier be placed in a locker

Where should a power amplifier be placed?

Whether you're using our equipment in your stack or units from another brand, we recommend that the amplifier/power amplifier is placed on the top of any stack of electronics. However as the amplifier is usually the heaviest component in most systems, this can limit the amount of equipment that should be placed under an amp in a stack.

Should I put my devices on top of my pre & power amplifier?

The first is your amplifier, or if you're using a separate pre and power amplifier the power amp section. The amplifier needs to be able to radiate any heat it generates whilst it's in use so placing devices on top of isn't something we'd encourage.

Should a power amplifier be placed on top of a stack?

The amplifier needs to be able to radiate any heat it generates whilst it's in use so placing devices on top of isn't something we'd encourage. Whether you're using our equipment in your stack or units from another brand, we recommend that the amplifier/power amplifier is placed on the top of any stack of electronics.

Does DC locker affect sound?

In my experience dc locker on power supplies does not effect the sound, on power amp it does, so solution of separate dc blockers has advantage that I can avoid putting dc blocker on power amp when I am having deep listenings. Does the hum impact overall situation of the system? DiggyGun Sep 2022 Well hum is movement and that generates heat.
