

China's solar capacity has expanded far beyond fivefold in the last five years and could double by 2025. Located in remote Qinghai province, with a total installed capacity of 2.2 gigawatts, it is China's ...

Far off the coast of Shandong, a new kind of power plant is quietly feeding China's coastal cities. A vast field of solar panels, fixed to steel trusses in shallow water, has become the world ...

China is using the high-altitude expanse for immense solar panel farms and wind turbines and has begun work on the world's largest hydroelectric dams.

The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility-scale solar capacity installed in the United States at the end of ...

A large part of the solar power capacity installed in China is in the form of large PV power plants in the west of the country, an area much less populated than the eastern part but with better solar ...

So there is a lot of uncertainty in the Chinese solar industry, but there are also irrefutable facts: China needs to continue to expand domestic solar capacity to reach its climate target...

Electricity from solar has overtaken hydropower in China and is poised to surpass wind this year to become the country's largest source of clean energy.

China has just connected what it believes to be the world's biggest solar power plant to the grid in northwestern Xinjiang.

China was responsible for installing a massive 256 GW of that solar capacity. For context, it took until September last year to pass the 350 GW mark. This year, the milestone was achieved in...

Midong features 5.26 million 650-W monocrystalline bifacial double-glass photovoltaic (PV) panels. The facility's infrastructure includes more than 1.23 million supporting piles, five 220-kV...
