

This replicable model highlights the positive impact DREA systems can have on the economic performance of rural MSMEs, the well-being of their members, and their contribution to ...

It represents all the energy required to supply end users in the country. Some of these energy sources are used directly while most are transformed into fuels or electricity for final consumption.

Our analysts track relevant industries related to the Bolivia Distributed Energy Market, allowing our clients with actionable intelligence and reliable forecasts tailored to emerging regional needs.

Alternative energy transition scenarios are explored for the future of Bolivia (2050). The energy system is modeled with a soft-linking process between two open-source tools. Explored ...

The country has ambitious plans to become a primary net exporter of energy to the region, with the goal of eliminating extreme poverty and universalizing basic services at home.

Besides reaching universal access, the Bolivian electricity sector has the added challenge of embracing the energy transition and shifting to cleaner energy sources while meeting the growing demand.

To better answer this question, a long-term optimization model of the Bolivian energy sector was developed with OSeMOSYS, considering the national energy demands, disaggregated by fuel and ...

The Powersystem was first presented to representatives of the Bolivian energy sector, including ministries, GIZ and ENERTRAG, in July 2022. The following months were characterised by ...

La transición hacia fuentes sostenibles es una prioridad, y una de las principales alternativas es la Generación Distribuida con energías renovables.

This work demonstrated that a Bolivian energy system with a high share of renewable resources is possible, leading to energy sovereignty addressing climate change.
