

The Dominican Republic's Electricity Regulatory Authority recently issued Resolution SIE-178-2025-MEM, introducing new regulations for the grid connection of battery storage systems ...

Guided by an ambitious goal to reach 300 MW of energy storage capacity by 2027, the nation is working to enhance grid stability and reliability, paving the way for a cleaner energy system. ...

The solicitation specifically seeks to contract new wind and solar photovoltaic generation bundled with storage systems, with project capacities ranging from 20 MW to 300 MW, to reach the ...

The Andres energy storage array is the first large-scale, advanced battery-based energy storage project to be centrally connected to the grid in the Dominican Republic and the Caribbean, providing grid ...

We provide important information on all the ongoing battery energy storage system (BESS) projects in Dominican Republic, including project requirements, timelines, budgets, and key ...

He highlighted its crucial role in creating a more resilient and sustainable electrical system. Veras noted that the country is making significant strides in both renewable energy adoption ...

Construction has started on the first major solar-plus-storage project in the Dominican Republic, which features a 24.8MW/99MWh battery energy storage system (BESS).

The Dominica Schools Microgrid Project serves as a proof point for how solar and storage systems can preserve community vibrancy through bolstering energy resilience amid intensifying climate-induced ...

The tender, coordinated by the state-owned electricity distribution companies (Empresas Distribuidoras de Electricidad, EDES), will award 600 MW through long-term power supply contracts, ...

As renewable energy adoption accelerates globally, countries like the Dominican Republic face unique challenges in balancing grid stability with growing electricity demands. Let's explore how this initiative ...
