

BEIJING, China, Sep 15 -- With more than 13.8 million charging stations installed across the country by March 2025, China's transition to new energy vehicles (NEVs) has been nothing short of exponential.

With the rapid adoption of new energy vehicles (NEVs), Beijing has been steadily expanding its network of super charging and battery swapping stations in recent years.

Major Chinese automakers such as BYD, Xpeng and Nio have now developed vehicles equipped with super-charging technology, which takes 15 minutes or so to charge batteries from 10% to about 80%.

Electric vehicles are proliferating worldwide, yet the urban infrastructure that must support them is often mismatched between demand and supply. This digest uses Beijing as a case study to explore how ...

BEIJING, Oct. 15 -- China unveiled a three-year action plan on Wednesday to improve its electric vehicle (EV) charging infrastructure, as part of its broader efforts to boost consumer confidence and accelerate EV ...

Data mining from smartphone offers a new lens to study EV charging behaviors. Location-based service big data reveals spatial heterogeneity of public charging demands in the large city. Mapping ...

The world's largest electric-vehicle maker is betting on a technology that has failed to take off in tens of other countries over the past decade. The Chinese government is rolling out special two-way charging ...

Find a charging point to charge your electric vehicle in our charging points map.

With dedicated policy and financial support for extending charging networks beyond developed urban centers, China's charging infrastructure network could be significantly improved, which will further unlock its vehicle ...

Find a place to plug in your electric car (EV) with PlugShare's database of charging stations! Map nearby Superchargers for the Tesla Model S, Quick Charge (CHAdEMO) for the Nissan Leaf, and map nearby ...
