

Phase change cold storage technology has the characteristics of large energy storage capacity, low carbon and recyclable. It can be combined with the traditional insulation box to obtain a ...

We analyze the energy consumption and GHG emissions for the transport of tomatoes in two cities representing contrasting climates, Phoenix, Arizona, and Chicago, Illinois, for conventional reefers ...

We studied a shipping container integrated with phase change material (PCM) based thermal energy storage (TES) units for cold chain transportation applications.

Designed for high-performance, temperature-controlled cold storage, Solarators® operate as efficiently as industrial freezers and chillers--without the fuel costs, emissions, or grid dependency.

The features of the LZY-MSC4 include solar-powered efficiency, mobility, and precision temperature control, ensuring a cold-chain solution that is more reliable and sustainable than its conventional fuel ...

The features of the LZY-MSC4 include solar-powered efficiency, mobility, ...

The development of Energy Internet promotes the transformation of cold chain logistics to renewable and distributed green transport with new distributed energy

Recognizing the urgency to adopt sustainable practices, solar-powered refrigerated containers have emerged as a promising solution. By harnessing the power of the sun, these ...

By combining solar, grid, and diesel power with intelligent energy management, these containers maintain stable temperatures for sensitive goods, reduce fuel consumption, and provide ...

Our off-grid refrigerated containers use solar energy to maintain ideal cooling conditions, ensuring freshness and reducing waste. Equipped with high-performance compressors and evaporators, our ...

Our scalable refrigeration solutions deliver optimal temperature performance for cold storage facilities and distribution centers, helping reduce energy use and protect temperature-sensitive goods.
