

The European Union Commission has approved a state aid scheme aiming to fund the rollout of over 9GW/71GWh of energy storage in Italy.

The residential energy storage market is expected to continue to contract in 2025, impacted by factors such as Eco-bonus subsidy cuts, falling electricity prices, and high borrowing costs.

The European Commission has approved, under EU State aid rules a EUR17.7 billion Italian scheme to support the construction and operation of a centralised electricity storage system.

Italy's storage expansion is driven largely by domestic needs: balancing its own grid and managing intermittent solar generation. Geography and infrastructure limitations mean that cross ...

By implementing large-scale electricity storage facilities, the Italian scheme aspires to reduce energy reliance on fossil fuels and foster a resilient grid, prepared to handle fluctuations in ...

In 2024, Germany, Italy and the UK accounted for about 70% of the total installed capacity in the EU. By 2030, Polimi estimates that Great Britain and Italy will have the largest installed...

The solution? A EUR177 billion storage masterplan approved by the EU Commission last August [8]. But wait, no--it's not just about building batteries. Let's unpack what's really driving Italy's storage ...

The government has set ambitious goals for increasing renewable energy on the national grid, with a particular focus on bolstering both solar energy and energy storage solutions tailored for ...

The scheme notified by Italy will support the construction of electricity storage facilities with a joint capacity of more than 9 GW/71 GWh. The scheme will run until 31 December 2033.

As Italy's energy mix is increasingly composed of variable renewable energy sources, electricity storage will be needed to integrate power generated by renewables into the national grid ...
