

The Ionity network of 350kW ultra-rapid chargers is the fastest way to recharge your EV. But which cars can take advantage of the technology?

While the 350kW charging capability is an impressive feat of engineering, it is not yet a universal feature across the EV market. As the technology continues to evolve and charging infrastructure expands, ...

Unfortunately, not every electric car out there is capable of charging at such high rates as 350kW. In this article, we are taking a look at some electric cars you can charge at 350kW.

Our Direct Current (DC) chargers offer fast charging speeds (Ultra-Fast 150 kW and Hyper-Fast 350 kW) --letting you charge in as little as 30 minutes! Here's what to expect when you charge with the ...

Kia EV6 - With its 800-volt system and capability to use 350kW chargers, the Kia EV6 can charge from 10% to 80% in just 18 minutes. Hyundai Ioniq 5/6 - Both models also feature 800 ...

Through its partnership with EVgo, Toyota opened its first EV fast charger on Monday. The new co-branded stations, with 350kW fast chargers, can serve up to eight EVs.

The Hyundai IONIQ 5, Kia EV6, Porsche Taycan, Lucid Air, and Tesla Model S Plaid are among the fastest charging cars available today, capable of accepting high power from 250kW or even 350kW ...

350 kW fast charging explained: liquid-cooled cables, 500-amp connectors, battery prep, and taper--why peaks are brief and stop times vary.

Result: many 400-V EVs will never see 350 kW on today's hardware, even in ideal conditions. Independent analyses and industry guidance echo this voltage-current reality.

Delta has delivered 10 chargers to date, and EVgo expects to receive additional 350kW BABA-compliant chargers from Delta Electronics later this year.
