What is the Clear Creek flywheel energy storage system?

The Clear Creek Flywheel Energy Storage System is a 5,000kW energy storage project located in Norfolk County, Ontario, Canada. The electro-mechanical energy storage project uses flywheel as its storage technology. The project was announced in 2013 and was commissioned in 2016.

Can a flywheel generate electricity on demand?

The flywheel's momentum can then be harnessed to generate electricity on demand. Temporal Power's flywheel technology provides high-performance energy storage with high power, fast response, and unlimited cycling capacity. Each flywheel weighs about 12,000 pounds and can spin at speeds in excess of 11,000 RPM.
