

This paper explores the use of manual screen printing to fabricate semi-transparent, scalable perovskite solar modules without the requirement for numerous laser-scribing steps.

In this work we discuss several possible options to achieve semitransparent perovskite-based solar cells.

In particular, by enabling transparency and high efficiency simultaneously, ST-PSCs hold great promise for future versatile utilization in the context of building-integrated PVs (BIPVs) or as top cells to be ...

In this work, we combine thin-film perovskite-based photovoltaics, a promising PV technology due to unique optoelectronic properties, with optimized laser-induced micro-patterning of ...

A perovskite solar cell (PSC) is a type of solar cell that includes a perovskite-structured compound, most commonly a hybrid organic-inorganic lead or tin halide-based material as the light-harvesting active ...

This review aims to explore color-neutral highly transparent and semi-transparent perovskite solar cells, encompassing their synthetic routes, challenges associated with their ...

In this study, we employed a full solution process to fabricate low-cost, high-efficiency transparent perovskite solar cells (PSCs) with tunable transmittance. By adjusting the concentrations ...

China-based perovskite solar cell and module manufacturer Mellow Energy, a spin-off of the Institute of New Energy Technology at Jinan University, announced it has fabricated what it claims...

Polysolar is a UK-based company that specializes in transparent solar panels, particularly focusing on building-integrated photovoltaics (BIPV) and transparent solar canopies.

Wavelength-selective transparent solar cells (TSCs), which are complementary technologies to traditional solar panels, enable the generation of solar power on agricultural land and ...
