

Initially requested by the Nordic Council of Ministers, this report is intended for everyone who has an interest in the development of the Nordic transmission grid and the challenges related to managing ...

The ViPES2X project demonstrates how electrolysers and battery systems, operated through an AI-supported optimisation model, can optimise power pricing while actively supporting grid balancing ...

10th International Conference on InsulatedPower Cables Refurbishment of the Copenhagen Transmission Grid Project Planning and Execution 10th International Conference on InsulatedPower ...

Solar park with storage in Denmark. A 10 MW lithium-ion battery system is expected to be installed by the end of 2024 at Better Energy Hoby solar park on Lolland in Denmark. A key ...

Energinet is an independent state-owned company that owns and operates Danish energy infrastructure. We ensure high security of supply in the electricity and gas sector in Denmark and ...

Physical inertia from a rotating synchronous condenser delivers exactly the amount of inertia needed to counteract any frequency variation, purely electromechanically, without the need for the control ...

Orsted's strategic partnership with Hitachi enhances grid stabilization technology applied to offshore wind, positioning it to be competitive with China in the expanding offshore wind market,...

Our whitepaper explores how repurposing thermal power plant generators and turbines as a synchronous condenser offers a cost-effective solution for maintaining grid stability during the ...

Gogreentech delivers innovative solutions for grid balancing and electrical grid stabilization in Denmark. Expertise in frequency regulation and renewable energy integration.

To deliver the requisite electricity grid structure by 2050, in June 2024, Danish transmission system operator (TSO) Energinet published its Langsigtet Udviklingsplan 2024 (LUP24) ...
