

Indicators of renewable resource potential apacity (kWh/kWp/yr). The bar chart shows the proportion of a country"s land area in each of these classes and the global distribution of land area across the cla

OverviewConsumption and accessBiomassElectricityRenewable energy Three primary energy sources make up the energy mix in Guinea: fossil biomass, oil and hydropower. Biomass (firewood and charcoal) makes the largest contribution in primary energy consumption. It is locally produced, while Guinea imports all the petroleum products it needs. The potential for hydroelectric power generation is high, but largely untapped. Electricity is not available to a high percentage of Guineans, especially in rural areas, and service is intermittent, even in the capital city of Conakry.

In 2021, the momentum was reinforced by the commissioning of the larger Souapiti Hydropower Station, also developed by CWE upstream. ...

The Guinean government has announced a long-term energy strategy focusing on renewable sources of electricity including solar and hydroelectric as a way to promote environmentally friendly ...

To address this critical need, the UN in Guinea is working with the government to support rural electrification initiatives and improve the living conditions of communities. Despite a significant increase in ...

The potential for hydroelectric power generation is high, but largely untapped. Electricity is not available to a high percentage of Guineans, especially in rural areas, and service is intermittent, even in the capital city of ...

Guinea faces a chronic electricity shortage and regular blackouts. To fix this, the government is fast-tracking renewable energy projects and grid interconnections. These efforts aim to stabilize power ...

Guinea"s hydropower plants (Kaleta and Souapiti) now supply clean energy domestically and export 1,174 GWh annually to Senegal, The Gambia, and Guinea-Bissau, supporting regional energy ...

Renewables such as solar panels, wind turbines and hydroelectric dams generate electricity without burning fuels that emit greenhouse gases and other pollutants.

Guinea"s electricity mix includes 74% Hydropower, 25% Unspecified Fossil Fuels and 1% Solar. Low-carbon generation peaked in 2022.

In 2021, the momentum was reinforced by the commissioning of the larger Souapiti Hydropower Station, also developed by CWE upstream. Together, Kaleta and Souapiti now generate 690 megawatts, ...

Access to electricity in Guinea is improving in urban areas, where it reached around three quarter of the population, but it is still almost absent in rural areas, and on average it reaches 33% of the population. ...
