

This paper introduces the design method of household photovoltaic power generation system and the economy after the design of the system is analyzed. Calculated the net present value and dynamic payback period of ...

The purpose of this study was to find a model system of power generation by using solar-cells for house. The research was a realization of concern in overcoming the electricity energy crisis....

It discusses how the technical aspects of concentrated solar power and photovoltaic power affect the economic viability of solar energy. The author describes how this sporadic energy source might be incorporated into a ...

This paper, therefore, deals with a state-of-the art discussion on solar power generation, highlighting the analytical and technical considerations as well as various issues ...

The purpose of the study is to find a model system of power generation by using solar-cells for a house and the optimum settings to improve the performance of the solar cells panel.

Scholars have explored factors influencing its adoption and proposed measures to foster its development. This paper systematically reviews the literature on factors influencing the adoption of solar PV. ...

This paper takes microprocessor as the control core and designs the overall scheme of household photovoltaic power generation system. According to the functional needs, the key components are selected, and the ...

This paper presents a novel and extensive dataset featuring comprehensive cross-sectional data from 13 households with nearly three years of electrical load, energy cost, and on-premises...

This study systematically reviews previous research papers published in the solar PV domain to understand common factors of households' behaviour in the context of intention to install solar PV systems ...

Therefore, this paper designs a new type of concentrated solar power generation system, taking user needs as the first goal and Achieve full and effective use of energy.
