

Trapped within the area's geothermal brine are massive reserves of lithium, an essential element in rechargeable batteries that power smartphones, laptops, electric vehicles, and ...

Gavin Newsom, the governor of California, previously referred to the Salton Lake as Saudi Arabia of lithium. Now this new discovery means that the lake is the biggest source of lithium ...

The Department of Energy announced in November 2023 that an analysis by the Lawrence Berkeley National Laboratory found that the Salton Sea region could have resources to ...

A significant lithium deposit, estimated at 18 million tons, has been discovered beneath California's Salton Sea, potentially transforming the US battery industry and reducing reliance on...

A groundbreaking discovery beneath California's Salton Sea has unveiled 18 million tons of lithium, a find poised to revolutionize America's energy landscape and significantly reduce reliance ...

Researchers have identified a staggering 18 million tons of lithium buried beneath the Salton Sea in Southern California's Imperial County. This calculation is four times the previous ...

A lithium gold rush is erupting beneath California's Salton Sea, where a \$540 billion discovery could supercharge U.S. battery independence.

A groundbreaking discovery has positioned California's Salton Sea as a pivotal player in the global lithium market, with scientists unearthing an estimated 18 million tons of the critical ...

Massive lithium reserves discovered under California's Salton Sea could boost U.S. domestic supplies of the critical mineral used to make EV batteries and other technologies.

California enters the global race to mine "white gold" Lithium -- "white gold" -- is produced from hard rock or extracted from natural geothermal brines, sourced from salt lakes like the Salton Sea.
