

Does New York have a grid?

New York's electricity transmission system, or "grid", is unique in that the grid operator that manages the system, the New York Independent System Operator (the NYISO), only manages the grid within New York State. The only other states that have a similar structure are California with CAISO and Texas with ERCOT.

How many customers does National Grid serve in New York?

National Grid serves approximately 1.7 million electricity customers and approximately 600,000 natural gas customers across upstate New York. National Grid acquired Niagara Mohawk Power Corporation (NMPC) in 2000 and still does business in New York as NMPC.

Will New York's electrical grid be reliable in 2026?

The current state of the electrical grid in New York is uncertain—the upstate region, while reliable now, is seeing potential for large load growth leading to reliability shortfalls, and the downstate region faces significant reliability challenges starting as soon as summer, 2026.

What is the New York power grid study?

In support of the Climate Leadership and Community Protection Act (CLCPA), the New York Power Grid Study was undertaken in order to identify distribution upgrades, local transmission upgrades, and bulk transmission investments that are necessary or appropriate for the power grid for the State of New York.
