

Today, we are the largest competence environment in Norway, and work in close collaboration with both Norwegian and international partners to support the development and implementation of a variety of ...

Investment in research and development is focused on innovative technologies, grid modernization, and improving the basics of manufacturing to create more efficient and recyclable ...

This target encompasses both small-scale rooftop installations and large utility-scale solar power plants, though the share between them is undetermined. This article analyses current ...

The potential is large, but it will only be unlocked with favourable framework conditions. This article analyses how Norway's regulatory landscape for solar energy is changing rapidly.

This centre is a consortium that aims at further developing the strong Norwegian photovoltaic industry, and producing substantial contributions towards making solar energy a significant renewable energy ...

Norway's rooftops may hold the key to a greener future. A new study reveals the country's buildings could generate vast amounts of solar power--enough to transform its energy landscape. ...

Solar energy is expected to be a key driver of renewable energy growth in the energy transition. In this report we look at the Norwegian conditions to engage in solar energy both nationally and internationally.

A new research paper has calculated the technical potential of installing solar on building walls and roofs across Norway and the feasibility of integrating the power into the country's grid.

FME SOLAR is dedicated to supporting the broad PV industry, the public sector and society in Norway by providing competence and cutting edge R& D in this very important field. With more than 1 billion ...

Effective energy management is crucial for aligning solar production with consumption patterns. This research study delves into the solar energy potential and capacity in Norway, aiming to ...
