

In 1973, the University of Delaware was responsible for constructing the first solar building, named "Solar One." The system ran on a hybrid supply of solar thermal and solar PV power.

The true breakthrough in solar panel technology came in 1954 at Bell Laboratories. Scientists Daryl Chapin, Calvin Fuller, and Gerald Pearson developed the first modern solar cell ...

What is the history of solar energy and solar panels? Humans used solar energy to start fires with the sun and glass. Learn about solar's history with ...

In 1973, the University of Delaware was responsible for ...

Solar panels, which convert sunlight into electricity through photovoltaic cells, have become an essential technology in our quest to reduce reliance on fossil fuels and combat climate ...

Modern solar panels trace their origins to the 19th century, with the discovery of the photovoltaic effect by Alexandre-Edmond Becquerel and the development of silicon solar cells by Bell Labs in the 1950s.

Charles Fritts installed the first solar panels on New York City rooftop in 1884. Courtesy of John Perlin. Take a light step back to 1883 when New York inventor Charles Fritts created the first...

A photovoltaic cell, also called a PV or solar cell, is a device that converts light (radiant) energy directly into electrical energy. PV cells are usually made from silicon.

In the 19th century, it was observed that the sunlight striking certain materials generates detectable electric current - the photoelectric effect. This discovery laid the foundation for solar cells. Solar cells ...

While experimenting with metal electrodes and an acidic solution, nineteen-year-old French physicist Alexandre Edmond Becquerel creates the first solar cell. This solar cell was known as a photovoltaic ...

Solar technology isn't new. Its history spans from the 7th Century B.C. to today. We started out concentrating the sun's heat with glass and mirrors to light fires. Today, we have everything from ...
