

This white paper focuses on tools that support design, planning and operation of microgrids (or aggregations of microgrids) for multiple needs and stakeholders (e.g., utilities, developers, ...

NLR is collaborating with the San Diego Gas & Electric Co. to model a microgrid in Borrego Springs, California, and evaluate how a microgrid controller with advanced functionality ...

The additional layer of intelligent functionality on Microgrids, enabling real-time and transactive (2-way) information and energy flows between consumers and providers characterizes a Smart MicroGrid ...

These sandboxes often prioritize grid-connected microgrids and emphasize the development of sophisticated control systems and market mechanisms for microgrid participation in ...

“; The sandbox enables demonstrations and trials in the regulated electric and gas sectors, particularly those that may require modified or reduced regulations in order to move forward.

As the energy sector embraces the transformative potential of smart grid technologies and innovative business models, regulators must strike a delicate balance between fostering ...

Regulatory bodies should be involved in enabling sandbox programs from the beginning and they should have an active role in fostering innovation towards more sustainable energy systems.

Therefore, the utilization of predictive control methods that rely on Model Predictive Control (MPC) and Artificial Neural Networks (ANN) may be effectively applied to model all three tiers of smart microgrid ...

The microgrid serves not only as a tool of increasing the resilience of the electricity supply system in the event of a large-scale blackout by keeping individual electrical islands energized.

The following download is for the latest development version of the Microgrid Design Toolkit. This download is intended for advanced users needing access to the latest development features.
