

Energy crises pushed solar development forwards and by the 2000s global solar PV installations passed 1 GW. Solar energy is now a major contributor to electricity generation and is set ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

The U.S. Energy Information Administration predicts solar energy will be the leading force behind this year's growth in the electric power industry.

Each quarter, the National Renewable Energy Laboratory conducts the Quarterly Solar Industry Update, a presentation of technical trends within the solar industry.

The report found that solar accounted for a whopping 66% of all new electricity-generating capacity added to the US grid in 2024. 50 GW of direct current (DC) solar capacity was ...

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this ...

Explore the top US utility-scale solar projects of 2024-2025. Learn how gigawatt-scale farms and integrated battery storage are powering America's energy future.

Between August and December this year, we expect that U.S. utility-scale developers will add 24 GW of solar electricity generating capacity.

Solar continues to dominate new electricity generation capacity added to the grid in the United States, according to the Energy Information Administration's (EIA) latest release of its Electric ...

Strong demand for new energy supply and rising power prices strengthen the market fundamentals for new solar projects in the long term. Overall, our low case is 18% lower than our ...
