

Norway's solar market experienced a slowdown in 2025, particularly among residential installations. The outlook for 2026 looks more optimistic, thanks to policy reforms supporting larger...

Norway's rooftops may hold the key to a greener future. A new study reveals the country's buildings could generate vast amounts of solar power--enough to transform its energy landscape. ...

The potential is large, but it will only be unlocked with favourable framework conditions. This article analyses how Norway's regulatory landscape for solar energy is changing rapidly.

Norway is a heavy producer of renewable energy because of hydropower. Around 88% of electricity production in Norway is from 1971 hydropower plants with a combined production capacity of over 40 ...

Although the solar industry is growing, it has accounted for only 1% of Norway's renewable energy mix due to a less favourable environment. Various support measures have been included in Norway's ...

This research study delves into the solar energy potential and capacity in Norway, aiming to assess the viability of solar power integration in the country's urban landscape.

This target encompasses both small-scale rooftop installations and large utility-scale solar power plants, though the share between them is undetermined. This article analyses current ...

During the recent surge in solar PV installations, the Nordic countries - Sweden, Norway, Finland, and Denmark - have increasingly embraced solar PV technology, defying their northern geographical ...

This passion for nature has made Norway one of the most attractive markets for solar cells. Although some of the appeal of cabin life is to take a time-out from technology, electricity is still ...

While hydropower has long been the country's backbone, the solar revolution and what it can mean for Norway is rapidly changing the energy landscape. The integration of solar energy with ...
