

Solar power generation exceeds coal-fired power

Renewable energy sources generated more electricity than coal globally for the first time in the first half of 2025, driven by rapid growth in China and India, a report by think tank Ember showed...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, ...

Renewable energy has produced more electricity than coal for the first time, according to a report from energy think tank Ember. Global electricity demand grew by 2.6% in the first half of ...

For the first time ever, renewables generated more power than coal as solar and wind outpaced global demand growth in early 2025.

Solar and wind are now growing fast enough to satisfy the world's rising appetite for electricity. In the first half of 2025 their combined growth exceeded global demand growth by 109%, ...

For the first time, renewable energy has overtaken coal as the primary source of electricity around the world, a new report says, indicating a shift in the global reliance on environmentally...

Electricity generation by the U.S. electric power sector totaled about 4,260 billion kilowatthours (BkWh) in 2025. In our latest Short-Term Energy Outlook (STEO), we expect U.S. ...

Renewable energy overtook coal as the world's leading source of electricity in the first half of this year - a historic first, according to new data from the global energy think tank Ember.

China's installed solar power capacity is projected to surpass coal-fired capacity for the first time this year, marking a major milestone in the country's energy transition and reinforcing its status ...

China is set to have more solar power capacity than coal for the first time this year, marking a "historic" milestone in the country's energy transition. Data released on Monday by a ...
