

Eking out more power from solar cells is an ongoing challenge for scientists, and now architect Andr#233; Broessel has developed a spherical glass energy generator that's said to improve efficiency by 35 ...

Rawlemon Solar Architecture -- a Barcelona-based startup -- has plans to change the solar game forever with a spherical glass solar energy generator. All developments in renewable ...

Rawlemon uses the promising optical properties of a transparent sphere filled with water. It acts like a giant magnifying glass that concentrates light up to 10 times more, directing these intense rays ...

German architect Andr#233; Broessel developed as a stand-alone power charger station for electro-mobility, the project uses the advantageous strategy of implementing a ball lens and specific ...

It captures energy even from the moon light. The entire concept is based on the structure of glass which is completely spherical, enabling the device to concentrate sunlight over a photovoltaic...

This generator will combine spherical geometry principles with a dual axis sun tracking system. The glass sphere is used to concentrate diffused sunlight into a small surface of tiny solar panels.

the spherical glass solar energy generator uses the advantageous strategy of implementing a ball lens and specific geometrical structure to improve energy efficiency by 35%.

The spherical generator works by using a large transparent sphere to focus sunlight onto a small surface area of mini-solar panels. Efficiency is enhanced because the solar panels used in ...

Shaped as a sphere that functions like a magnifying glass, this spherical solar collector concentrates the incoming diffuse sunlight on its surface through the spherical lens to a collector containing solar ...

A German Architect has designed an innovative form of a solar power generator. Unlike being flat or thin like other PV panels, this one is a giant transparent sphere!
