

How many battery energy storage systems were installed in Europe in 2024?

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record-breaking installations, and bringing Europe's total battery fleet to 61.1 GWh. However, the annual growth rate slowed down to 15% in 2024, after three consecutive years of doubling newly added capacity.

Why is battery energy storage important in Europe?

Battery energy storage in Europe is key to renewable integration and grid stability, requiring tailored risk management and insurance strategies for growth. The BESS market in Europe is experiencing unprecedented growth, propelled by the continent's renewable energy ambitions and the urgent need for energy security.

How big is European battery storage in 2024?

European battery storage installations set a new record in 2024 with 21.9 GWh added, bringing total capacity to 61.1 GWh despite a slowdown in growth to 15 percent after three consecutive years of doubling capacity.

How much battery storage will Europe have in 2025?

In the most-likely scenario for 2025, 29.7 GWh of battery storage will be installed in Europe, representing a 36% annual growth. By 2029, the report anticipates a sixfold increase to nearly 120 GWh, driving total capacity to 400 GWh (EU-27: 334 GWh).

The main energy storage method in the EU is by far "pumped storage hydropower", which works by pumping water into reservoirs when there is an electricity surplus in the grid - for example ...

International energy consultancy Wood Mackenzie has released groundbreaking research showing Europe's battery energy storage system (BESS) market is experiencing ...

The European battery storage market grew by 15% in 2024, reaching 61.1 GWh of installed capacity. SolarPower Europe warns that, despite projecting to reach 400 GWh by 2029, the ...

New report: European battery storage grows 15% in 2024, EU energy storage action plan needed Press Release 7 May 2025 MUNICH, Germany (Wednesday 7th May 2025): New analysis ...

A new analysis from LCP Delta and Energy Storage Europe shows that pumped hydro storage holds the largest share of installed capacity at 50.6 GW, with battery energy storage systems ...

TotalEnergies and Canadian Solar are boosting the future of energy storage in Europe with major projects in Germany and the UK.

European battery storage installations set a new record in 2024 with 21.9 GWh added, bringing total capacity to 61.1 GWh despite a slowdown in growth to 15 percent after three ...

Let's face it: Europe's energy storage game is getting hotter than a Tesla battery during peak discharge. With operated battery storage capacity now exceeding 20GW [1], the continent is rewriting the rules ...

Europe's battery storage sector is entering a period of rapid scale-up, with annual deployments set to climb from 11 GW in 2024 to 16 GW in 2025, a 45% year-over-year increase, ...

Battery energy storage in Europe is key to renewable integration and grid stability, requiring tailored risk management and insurance strategies for growth.
