

# What are the good outdoor power supplies

What can I do during a power outage?

During a power outage you can power lights, recharge devices, provide limited use of appliances, and run two CPAP machines all night.

How much power does a power station need?

Just enough power for lighting and devices. If you are only concerned about short-duration blackouts, lasting less than an hour, and you don't intend to use electricity to cook, refrigerate, or run a space heater, then a less expensive power station with 300 to 1,000 watts is a great solution.

Which solar panel is best for a low-end power station?

As you can see in the table above, a 100-watt solar panel is the only option for a low-end power station in the 300 watt or lower capacity, and we consider 100 watt solar panels impractical for any power station with a capacity of 1,000 Wh or higher. We recommend 200-watt panel (s) as the right solution for 1,000 Wh to 2,000 Wh capacity range.

Should I buy a 1000 watt power station?

If that is all you need, then save some money by buying a 1,000 watt power station like Anker Solix C1000, which has more than enough power for LED lights and most common devices, and while it has enough power to run a CPAP machine all night we don't recommend it for that use since its fan is noisy.

Join us as we explore the 10 best outdoor power stations of 2025, and discover which one may revolutionize your adventures.
