

# What size photovoltaic panel is best for an inverter

What size solar inverter do I Need?

Your inverter size should match your solar array's capacity, not your electricity bill. This means your inverter doesn't need to power your entire home--it just converts whatever your panels generate. Let's say you have a 6kW solar array (twenty 300-watt panels).

How do I determine a solar inverter size?

**System Size (Total DC Wattage of Solar Panels)** The first step in inverter sizing is to determine the total DC wattage of all the solar panels in your system. This information is typically provided by the manufacturer and can be found on the panel's datasheet.

How do I choose a solar inverter?

This is the most critical factor in solar inverter sizing. Check the total wattage of your solar array (DC) and use it to calculate the appropriate inverter output (AC). For optimal results, a 6.6kW array typically pairs with a 5kW inverter, falling within the accepted array-to-inverter ratio of 1.15 to 1.33.

Why do solar panels need larger inverters?

Areas with higher irradiance levels may require larger inverters for the same size array due to increased power production. The process of inverter sizing involves understanding the relationship between DC (Direct Current) from the solar panels and AC (Alternating Current) required for powering appliances. The Inverter Sizing Formula is -
