

Between 1990 and 2019, the average annual growth rate of solar energy supply exceeded that of any other energy source.² The rise of solar offers a "ray of hope" that we may be able to curb emissions ...

By 2025, 3.5 million kilowatts of wind power, 300,000 kilowatts of photovoltaics, and 380,000 kilowatts of electrochemical energy storage will be completed, and the proportion of ...

This information is drawn from GlobalData's Power Intelligence Center, which provides detailed profiles of over 170,000 active, planned and under construction power plants worldwide from announcement ...

Additionally, a dedicated joint service team was established, a detailed Gantt chart outlining the grid connection progress was developed, and list-based management practices were ...

In order to promote the pilot in a scientific and orderly manner, Jungar Banner has facilitated rooftop distributed photovoltaic power generation projects in a diversified approach step by ...

The Solar Energy Industries Association (SEIA) is leading the transformation to a clean energy economy. Learn more at [seia](#)

China's PV industry has established a preliminary policy system. Industrial policy is lagged compared with the market development. Reducing carbon footprint of PV products is critical for policy ...

As a key achievement of energy cooperation between the Ningxia Hui Autonomous Region and Hunan Province, it represents a significant and milestone-driven advancement for the ...

China's 1.4 TW operating solar and wind outstrips thermal power In Q1 2025, China's wind and solar capacity surpassed its thermal (coal and gas) capacity for the first time, supplying nearly 23% of the ...

To access additional data, including an interactive map of global solar farms, a downloadable dataset, and summary data, please visit the Global Solar Power Tracker on the Global Energy Monitor website.
